

The Pursuit of Data

How do users interact with information? How should we organize it? How can we maintain information and avoid obsolete resources? These are some of the questions that we should consider when designing information-driven experiences.

This visualization represents how users interact with dashboards. Each circle or node represents a dashboard and each line or link represents a user that has viewed both dashboards. The colors represent the team that created the dashboard. With this structure different types of behavior become visible. Some dashboards are viewed by most of the users. Other groups are isolated and viewed by only a small number of users.
